

SEMINÁRIO DE EQUAÇÕES DIFERENCIAIS PARCIAIS

SUMÁRIO

SUMÁRIO

- 1** On Some Stationary Navier-Stokes Type Problems
- 2** On concentration of solution to a Schrodinger logarithmic equation with deepening potential well
- 3** Sharp well-posedness for a coupled system of mKdV type equations
- 4** The Swift-Hohenberg Equation under directional-quenching: finding heteroclinic connections using spatial and spectral decompositions
- 5** The Schauder Estimate for kinetic integral equations
- 6** Positive solutions of quasilinear elliptic equations with exponential nonlinearity combined with convection term
- 7** Caracterização da velocidade de decaimento da energia para algumas equações da Dinâmica dos Fluidos
- 8** Alguns resultados de existência e multiplicidade para equações com crescimento natural no gradiente

SUMÁRIO

9

Propriedades de continuação única para soluções da equação Camassa-Holm

10

Existence of positive solutions of Schrödinger equations with vanishing potentials

11

Elliptic problems with a gradient term

12

Atratores globais para a equação semilinear do calor rapidamente dissipativa

13

Unsteady Stokes Equations and the Fractional Leibniz Rule

14

Existence of solutions for a Schrödinger type equation

15

Remarks on Hénon problems in a ball

16

Sub-supersolution method for a quasilinear elliptic problem involving the 1-laplacian operator and gradient term

SUMÁRIO

17

Modern Equations for Water Waves
