

SEMINÁRIOS DE SISTEMAS ESTOCÁSTICOS E DINÂMICOS

SUMÁRIO

SUMÁRIO

1

Periodic orbits in the restricted three-body problem and Arnold's J + invariant

2

An approach for integrating a class of multiplicative-noise S(O)DEs under non-standard assumptions

3

Behavior of the Hermite sheet with respect to the Hurst index.

4

The 1-dimensional Log-gas and its Sine Gordon representation.

5

Aspectos ergódicos de difeomorfismos parcialmente hiperbólicos

6

PDEs from ergodic Mean Field Games with Hörmander diffusions

7

Stochastic Control and Differential Games with Path-Dependent Influence of Controls on Dynamics and Running Cost

8

Variational formulas for functionals of the Fractional Brownian Motion and applications to Large Deviations Principles

9

Existência de solução para equações com representação estocástica

10

Solving the conflict between differentiation and nonlinear operations

11

Strong-Trajectory approximation 2D-Navier Stokes by stochastic particle systems with moderate interaction

12

Averaging principle for Lévy diffusions

13

Sobre alguns aspectos analíticos da quantização

14

Um Teorema de Limite Central Para Estados de Equilíbrio em Espaços Poloneses

15

O problema de continuidade dos expoentes de Lyapunov

16

Momentos de expoentes de Lyapunov e semigrupos em grupos de Lie
