

SEMINÁRIOS DE SISTEMAS ESTOCÁSTICOS E DINÂMICOS

SUMÁRIO

SUMÁRIO

1

Integration of coupled stochastic oscillators driven by external random forces

2

Utility maximization in pure-jump models driven by marked point processes and nonlinear wealth dynamics

3

A Morse complex for Lorentzian geodesics

4

Estabilidade de Folheações via Teorema da Função Inversa de Nash-Moser

5

On periodic points of symplectomorphisms

6

Vertical martingales, stochastic calculus and harmonic sections

7

Teorema do Limite central para o módulo de continuidade das médias de observáveis em famílias Transversais

8 Dinâmica de semimartingales com saltos.

9 Estimativas para entropia topológica de difeomorfismos simpléticos genéricos não Anosov

10 O centro de massa em outras geometrias

11 Hankel Transformation: a survey

12 Fluxos de Anosov de contacto que estão R-cobertos

13 Ações Anosov de codimensão um de grupos nilpotente

14 On the Stochastic Transport Equation

15

Finslerian Diffusions in Forest Ecology: Retrospective and Open Problems

16

Interacting systems of particles with many particles

17

A semi-discrete approach of some Hamilton-Jacobi equations

18

Macroscopic energy fluctuations: from normal diffusion to superdiffusion in the evanescent noise limit

19

Geometria espectral de espaços singulares

20

On the representation of large deviations rates for small Gaussian noise

21

New type of homogenisation problem for stochastic parabolic equations

22

Gradient estimates via FBSDEs and applications to stochastic multi-dimensional Burgers equations
