

SEMINÁRIOS DE SISTEMAS ESTOCÁSTICOS E DINÂMICOS

SUMÁRIO

SUMÁRIO

1

Aproximações à conjectura de Nivat

2

A coexistência de quatro ciclos limites em campos vetoriais seccionalmente lineares em $\mathbb{R}^3$

3

Additive noise does not destroy a pitchfork bifurcation

4

On the integration of a Random Carathéodory-type differential equation arising in the simulation of the stochastic transport equation

5

Collective dynamics in heterogeneous random networks

6

Sistemas não conservativos e aplicação à modelização do gas kick na indústria petrolífera off-shore

7

Periodic solutions of second order relay equations

8

Algebraic geometric classification of the singular flow in the contrast problem in nuclear magnetic resonance

9

Equilibrium fluctuations in interacting particle systems

10

Ação de fluxos estocásticos em formas diferenciais

11

Complex powers of differential operators: Applications to Bessel operator

12

An approach to studying isochronicity problem and bifurcations of critical periods

13

Forward-backward SDEs and their connection to PDEs, SPDEs, and PIDEs

14

First exit times for Lévy-driven diffusions with exponentially light

15

Infinite dimensional quotients and geometry on moduli spaces of flat connections

16

A little bit of planetary magnetospheres dynamics

17

Moments of Recurrence Times for Markov Chains

18

Integração de formas tempo-dependentes com respeito aos fluxos estocásticos

19

A backward lambda-Lemma for the forward heat flow

20

Sobre a simulação numérica da equação estocástica semilinear de transporte
