

5.5 Hierarchical Regression Models: objective Bayesian Analysis

Prof. Dr. Helio dos Santos Migon
DME - UFRJ

Resumo

We will start this talk with some examples of projects developed during a long career in Industry and Academia. They were the inspiration for various methodological and theoretical developments during academic life. We will introduce the regression models, hierarchical regression with varying parameters, we will also discuss aspects of robustness, and conclude with recent contributions to objective a priori distribution.
